README FILE TO ACCOMPANY FRAC FOCUS 1.0 and FRAC FOCUS 2.0 DATASETS
 LEVELS L0, L1, L2, L3, and L4
 Data permalink: <http://dx.doi.org/10.7910/DVN/EFNV5J>
 Datasets to accompany Energy Policy article at: 10.1016/j.enpol.2015.11.002
 Revision History:

***V3 12 December 2015
 -added prepublication version of Energy Policy paper located at
 10.1016/j.enpol.2015.11.002
 -minor updates to methods paper
 ***V2 2 December 2015
 -added L4 .txt files by state, including dividing Texas by Job Start Year
 -renamed files with Level preceding name for more logical organization
 -Minor updates to methods paper, including addition of data link address.
 ***V1 21 July 2015

Konschnik, K (kkonschnik@law.harvard.edu) and Dayalu, A (adayalu@seas.harvard.edu)

Contents:

- (1) Level 0 Data Description
 - (2) Level 1 Data Description
 - (3) Level 2 Data Description
 - (4) Level 3 Data Description
 - (5) Level 4 Data Description
-

Notes:

- i. *****IMPORTANT NOTE*****
 We recommend use of L2 data for analysis of "AS-IS" FracFocus data. L0 and L1 datasets are provided for information only, and contain various formatting issues that prevent smooth reading and analysis. The L2 datasets addressed those issues while preserving the original FracFocus SQL-database content.

 L3 and L4 products are derived from the L2 dataset and contain additional fields we found necessary to accomplish our specific analyses; these may or may not be useful to others. In addition, the L3 and L4 products are SUBSETS of the original FracFocus dataset (at the L2 level) based on our analysis QA criteria of a selecting the latest (unique) form for a particular job occurring between January 1, 2011 and April 13, 2015.

 - ii. Original data available in SQL format from <http://fracfocus.org/data-download>
 - iii. The data contained in these files is based on data received directly from the Groundwater Protection Council (GWPC) on April 14, 2015. It contains data from forms submitted through April 13, 2015.
 - iv. For details on data processing see the accompanying Methods Paper, "FracFocus Chemical Disclosure Registry 1.0 and 2.0 Data Conversion and Cleaning Methods Paper" (Dayalu and Konschnik 2015) accompanying these data.
- =====

%%
 1) Level 0 "L0" Data Description
 %%%

The L0 dataset contains raw, pipe (|) delimited output from querying the RegistryUpload, Purpose, and Ingredients Tables in the original SQL database. There are 12 "|"-delimited text files contained in this folder. With the exception of the RegistryUpload table which was queried and output to a single file, all other fields from the Ingredients and Purpose tables were queried and output column-by-column to individual text files.

1.
 File(s) output from querying RegistryUpload table: FFApril_regupload.txt
 Contains the following fields:
 ++++++ ++++++
 FIELD NAME DESCRIPTION
 ++++++ ++++++
 pKey: Machine generated primary key for RegistryUpload table joins
 JobStartDate: Date Job was reported as started, "YYYY-MM-DD HH:MM:SS" format
 JobEndDate: Date Job was reported complete, "YYYY-MM-DD HH:MM:SS" format
 APINumber: 14-digit unique well identification number
 StateNumber: 2-digit API-system state code
 CountyNumber: 3-digit API-system county code
 OperatorName: Name of well operator
 WellName: Name of well
 WellType: Type of well (e.g. Gas, Oil)

Latitude: Latitude of well, decimal degrees
 Longitude: Longitude of well, decimal degrees
 Projection: Geodetic Reference system (one of NAD27,Nad27, NAD83, Nad83, WGS84)
 TVD: True Vertical Depth of well, an imaginary perpendicular line from the surface to the bottom of the borehole (UNITS?)
 TotalBaseWaterVolume: Volume of water injected into well
 TotalBaseNonWaterVolume: Volume of non-water components injected into well
 StateName: Name of State in which well is located
 CountyName: Name of County in which well is located
 SubmitTimeStamp: Date form was submitted, "YYYY-MM-DD HH:MM:SS" format. Can refer to amended time of submission, if form was re-submitted at any point.
 FFVersion: FracFocus Version (1 or 2) associated with form submission
 FederalWell: True/False field
 Amended: True/False/" " field
 OriginalSubmitTimeStamp: Original Date form was submitted, preserved in the event of amendments. "YYYY-MM-DD HH:MM:SS" format.

2. File(s) output from querying Purpose table:

FFApril_purpose_tradename.txt,
 FFApril_purpose_supplier.txt,
 FFApril_purpose_purpose.txt
 Contains the following fields:

```

+++++++
FIELD NAME      DESCRIPTION
+++++++
pKey:           Machine generated primary key for Purpose table joins
pKeyRegistryUpload: Machine generated primary key for RegistryUpload table
                  joins
TradeName:      Chemical trade name
Supplier:       Chemical Supplier Name
Purpose:        Chemical Purpose
    
```

3. File(s) output from querying Ingredients table:

FFApril_ingreds_casnumber.txt,
 FFApril_ingreds_ingredcomment.txt,
 FFApril_ingreds_ingredmsds.txt,
 FFApril_ingreds_ingredname.txt,
 FFApril_ingreds_massingred.txt,
 FFApril_ingreds_pcthfjob.txt,
 FFApril_ingreds_pcthighadd.txt,
 FFApril_ingreds_thirdpartycalc.txt,

```

+++++++
FIELD NAME      DESCRIPTION
+++++++
pKey:           Machine generated primary key for Ingredients table joins
pKeyPurpose:    Machine generated primary key for Purpose table joins
CASNumber:      Chemical Abstract Service Registration Number, for
                  unique Chemical identification purposes
IngredientComment: Comment field
IngredientMSDS: True/False field for availability of MSDS
IngredientName: Chemical Synonym(s)
MassIngredient: Mass of reported ingredient (UNITS?)
PercentHFJob:   Maximum Ingredient Concentration in Hydraulic Fracturing
                  fluid (% by mass)
PercentHighAdditive: Maximum Ingredient Concentration in Additive
                  (% by mass)
ThirdPartyCalc: True/False field (purpose?)
    
```

 2) Level 1 "L1" Data Description
 #####

There are 12 L1 data files, mirroring those described in the L0 section above. The L1 data sets are identical in content to L0 with the exception of removal of newline "\n" instances. This was necessary for removal of newline fields often erroneously appended to non-end-of-line fields. See the Methods Paper for details. The L1 data file naming scheme is identical to that of the L0 files, except they are all preceded with "L1_CLEAN_"

NOTE: The formatting of the L1 dataset is such that all lines are wrapped into a single line. It is not recommended for use in analysis; it is an intermediate

data product.

```

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
3) Level 2 "L2" Data Description
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

There are 4 L2 data files: three "|" -delimited text files and one .RData format file. The L2 cleanup process continued the formatting procedure to finally output 3 tables for RegistryUpload, Purpose, and Ingredients fields. See methods paper for details.

L2 .txt Files: Description

+++++

L2_ChemRegApril_regupload_clean_pipe_delim.txt:

Final technical formatting of RegistryUpload table fields.

No merging required as entire table was queried at once.

L2_ChemRegApril_purpose_clean_pipe_delim.txt:

Final technical formatting of Purpose table fields. Merged in Rv3.2.0 using the

Purpose table pKey as the join.

L2_ChemRegApril_ingreds_clean_pipe_delim.txt:

Final technical formatting of Ingredient table fields. Merged in Rv3.2.0 using the

Ingredients table pKey as the join.

L2 .RData File: Description

+++++

L2_ff_clean.RData: Contains two R objects: reg_upload, ff2_clean

//////////

(1) reg_upload

Contains all header fields for FracFocus 1.0 and 2.0,

read in from ChemRegApril_L2_regupload_clean_pipe_delim.txt

Naming convention of fields preserved as in L0 and L1 data sets.

//////////

(2) ff2_clean

Contains ALL FracFocus 2.0 forms with associated Purpose and Ingredients data.

Read in from ChemRegApril_L2_purpose_clean_pipe_delim.txt and

ChemRegApril_L2_ingreds_clean_pipe_delim.txt.

Purpose data merged with relevant RegistryUpload data by joining across the RegistryUpload pKey.

Ingredients data merged with joined RegistryUpload/Purpose data using the Purpose pKey.

Naming convention of fields preserved as in L0 and L1 data sets,

with the exception of the pKeys: all pKey fields were renamed

prior to the merging process to reflect table of origin

(one of "pKeyRegistryUpload", "pKeyPurpose",

or "pKeyIngredients"). There is no longer a field named

simply "pKey".

```

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
4) Level 3 "L3" Data Description
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

There is a single .RData file. It is a subset of the L2 data, based on our analysis QA criteria of a selecting the latest (unique) form for a particular job occurring between January 1, 2011 and April 13, 2015. It also contains several additional fields, created during our data standardization/cleanup process.

L3_ff_clean.RData: Contains two R objects: forms_latest, ff2_forms_latest

//////////

(1) forms_latest

Contains all header fields as in L2 dataset, and additionally contains the following NEW or MODIFIED fields:

+++++

FIELD NAME	DESCRIPTION
CASNumber	MODIFIED from L2 CASNumber field to remove spaces. This prevents correctly entered CASNumbers from being flagged as invalid if embedded spaces were present.
search_id_form	"JobStartDate APINumber"; interchangeable with pKeyRegistryUpload as a unique form identification field at this L3 stage; added to aid in the form sub-selection process.
LatitudeClean	Latitude, decimal degrees, converted to NAD83 from NAD27 instances. NAD83 and WGS84 instances remained the same as in the Latitude field.
LongitudeClean	Longitude, decimal degrees, converted as described

in LatitudeClean field.

ProjectionClean: Geodetic reference system, pointing to datum of LatitudeClean and LongitudeClean fields. One of NAD83 or WGS84.

StateNameFromCoords: State Name based on LatitudeClean and LongitudeClean fields, from querying the FCC database located at <https://www.fcc.gov/developers/census-block-conversions-api>

StateAbbFromCoords: State Abbreviation based on LatitudeClean and LongitudeClean fields, from querying the FCC database as above

CountyNameFromCoords: County Name, based on LatitudeClean and LongitudeClean fields, from querying the FCC database as above

CountyCodeFromCoords: County Code, based on LatitudeClean and LongitudeClean fields, from querying the FCC database as above

StateNameFromAPI: State Name, derived from the first two digits of the user-input API number. NOTE: this is a different number system from the Federal Information Processing Standard state code (FIPS) code. The different system was accounted for in the conversion process.

```

//////////
(2) ff2_forms_latest
FracFocus 2.0 header, Purpose, and Ingredient data. In addition to
the fields described above it also contains a single NEW field:
+++++
FIELD NAME      DESCRIPTION
+++++
SupplierClean   Standardized chemical supplier naming scheme for
                 the top suppliers -- Halliburton, Baker Hughes,
                 Schlumberger, and Multi-Chem (Halliburton).
                 All entries in this field that correspond to other
                 Suppliers are designated as NA

```

```

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
5) Level 4 "L4" Data Description
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

L4 data is derived from the L3 dataset. It also contains several additional fields, created during our data analysis process.

There are two pipe "|" delimited text files of the (1) Header data and (2) FracFocus2.0 all data. There is also a single .RData file with the Header and FracFocus2.0 datasets. In addition, there are pipe "|" delimited text files written out containing header and ingredient data FOR EACH STATE that has submitted data to FracFocus in the time period covered by the original dataset.

```

L4_ff1and2_header.txt:      FF1.0 and FF2.0 Header Data. Contents are as below, detailed in the
                             .RData L4 file description.

L4_ff2_all.txt:            FF2.0 all data. Contents are as below, detailed in the .RData L4
                             file description.

L4_ff_latest_forms.RData:  Contains two R objects: forms_latest, ff2_forms_latest

L4_ST_Header_Data.txt:     Contains state-specific header data for FF1.0 and FF2.0

L4_ST_FF2_Ingredients_Data.txt: Contains state-specific FF2.0 data where ST is the two letter
                             State abbreviation

```

***** IMPORTANT NOTE FOR TEXAS DATA ONLY *****

```

Due to the volume of its data, ONLY TEXAS datasets are broken
up by years, where the year refers to the reported year of the Job
Start Date. The years are 2011 through 2015.
eg., TX_2011_Header_Data_L4.txt; TX_2011_FF2_Ingredients_Data_L4.txt

```

```

The maximum number of rows for Texas is
in the TX_2014_FF2_Ingredientbts_Data_L4 file (504,629 rows)
which should be read completely by Excel versions beginning in 2007.

```

```
//////////
(1) forms_latest
Contains all header fields as in L3 dataset, and additionally
contains the following NEW field:
+++++
FIELD NAME      DESCRIPTION
+++++
StateOK         True/False field based on data QA requirement of
                no state locational ambiguity. Flagged as TRUE if
                StateNameFromAPI matches the independent field
                StateNameFromCoords. Flagged FALSE if otherwise.
```

```
//////////
(2) ff2_forms_latest
FracFocus 2.0 header, Purpose, and Ingredient data. In addition to
the field described above it also contains several NEW fields:
+++++
FIELD NAME      DESCRIPTION
+++++
CASNumberClean: All leading zeroes removed from mathematically
                valid CASNumber fields. All other entries in the
                CASNumber field labeled as NA in CASNumberClean.
CASLabel:       Flagged relative to original CASNumber field.
                One of "Valid", "Invalid", "Confidential", "Proprietary",
                "Trade Secret", "N/A", or "Systems Approach"
WithheldFlag:   True/False field. Flagged TRUE for CASLabel entries
                corresponding to "Confidential", "Proprietary",
                "Trade Secret", or "N/A". Flagged FALSE for all
                others.
Systems_Approach: True/False/NA field. Flagged TRUE if entry was
                designated as Systems Approach AND supplier was a
                non-NA entry in the SupplierClean field. Flagged
                FALSE if the ingredient record was not a systems
                approach type entry for the non-NA entries in
                SupplierClean. For all other suppliers (NA in the
                SupplierClean field), Systems_Approach was flagged as
                NA (i.e., untested).
IngredientNameClean: Standardized ingredient name obtained by
                database searches of CASNumberClean entries.
```

```
===== END =====
```
